THE BEST FOOTPRINT IS NO FOOTPRINT

COURSE KITS NOW PART OF CARBON OFFSET PROGRAM

Can you walk softly and never leave a mark? With York's new 'carbon neutral' course kits you can. The kits are now being 'carbon offset', while environmentally responsible printing practices are also being used (such as incorporating local papers produced with sound forestry practices and recycled fibre content). York University is contributing approximately 10 cents per kit to buy local renewable energy and support other projects such as tree planting, through Zerofootprint™, to offset a comparable amount of greenhouse gases emitted in the production of kits. The net carbon footprint of course kits is zero. Good for you. Good for York. And good for the environment. Together we can all benefit from a better campus.
